fundamentals of fluid mechanics - tuhh - the fluid layers there is an imaginary separation plane. it is assumed that all molecules of the same layer move with the same velocity. the molecule velocities in two layers are different. since the separation plane is permeable, molecule exchange between the fluid layers occur through diffusion. fig. 1.6: fluid layers with different velocities

fundamental concepts in fluid mechanics - geophysical fluid dynamics and bio-fluid mechanics. 2. fluids a fluid is a substance that may flow. that is, the particles making up the fluid continuously change their positions relative to one another. fluids do not offer any lasting resistance to the displacement of one layer over another when a shear force is applied. this means that if a ...
