mass transfer: definitions and fundamental equations - is the mass concentration of a (mass of a per volume of solution), $a = \frac{m_a}{V}$ where is the total density (ρ is the summed mass of all particles, irrespective of particle type, per volume) of the solution and a is called the mass fraction of a (i.e. $a = \frac{m_a}{m}$). summing the mass fractions of all species must equal unity $\sum a_i = 1$
